

How UB's Student Record System (SRS) Stores Student–Program Relationships

1. Core Student Profile (Master Record)

UB maintains one master profile for each student. This includes:

- Name
- Date of birth
- Email
- Phone number
- National ID or birth certificate information

This profile has a unique internal StudentID (not the matricule).

2. Program Enrollment Records

Each time a student enrolls into a program (Bachelor, Master, PhD), a new enrollment record is created.

This includes:

- StudentID (foreign key to master profile)
- Program name (e.g., Computer Science, Accounting)
- Level (Bachelor, Masters, etc.)
- Faculty
- Matricule (unique for that program)
- Academic years and status

3. One Student, Multiple Programs

A student may have multiple program enrollments under the same StudentID.

Thus:

- Same student → multiple matricules
- Same student → same email allowed

The SRS uses StudentID internally, not email, to avoid conflicts.

4. Transcript & Academic History

Each program enrollment maintains its own transcript, GPA, courses, and results.

5. Why Emails Can Repeat

Emails are not used as primary keys.

The StudentID is unique, and each program is linked to it.

This allows one student to register for multiple programs without email issues.

How a Student Signs Into the UB Student Portal

1. Login Credentials

The portal typically uses:

- Email address or phone number, OR
- Admission number / application number (for new students)

The system authenticates using the master StudentID.

2. Loading the Student Dashboard

Once logged in, the system retrieves:

- StudentID → mapped program enrollments

3. Selecting the Program View

If the student has only one program:

- Portal automatically loads that program.

If the student has multiple programs:

- Portal shows a “Select Program” screen (e.g., Bachelor of CS, Masters of CS).
- Each opens its own academic dashboard.

4. Why Login Is Not Affected by Multiple Programs

Because authentication is tied to the single StudentID, not the matricule.

Each matricule only controls academic records, not login credentials.

Summary

- One student = one StudentID (master profile)
- One student can have multiple programs = multiple matricules
- Login uses StudentID, not matricule
- The system then displays the program(s) linked to that student
